TEST STRATEGY DOCUMENT

Streamline Retail – Mobile App & QA Operations

Disusun oleh: QA Lead
Tanggal: 30 Mei 2026
Versi: 1.0
Proyek: Streamline Mobile App 2.0 dan seluruh rilis mendatang

---

1. QUALITY GOALS & STANDARDS

1.1 Definisi Kualitas

Kualitas di Streamline Retail adalah perangkat lunak yang aman, andal, mudah digunakan, dan stabil di berbagai perangkat (iOS/Android), jaringan, serta kondisi penggunaan nyata.

1.2 Alignment dengan Tujuan Bisnis

Tujuan Bisnis	Kontribusi Kualitas
Retensi pelanggan	Aplikasi stabil meningkatkan kepercayaan pengguna
Keamanan data	Tidak ada insiden keamanan kritis
Kecepatan transaksi	Respons cepat untuk operasional ritel
Adopsi fitur	Validasi melalui testing dan UAT

1.3 Metrik Kualitas

Metrik	Target	Metode Pengukuran
Test coverage	≥ 80%	Report CI/CD
Defect leakage (S1/S2)	≤ 2 per bulan	Jira production defects
CSAT	≥ 90%	Survey pengguna
Uptime sistem	99.5%	Monitoring tools
Security incidents	0	Security testing report
MTTD (S1)	< 1 jam	Incident tracking
MTTR (S1)	< 1 hari	Incident tracking

---

2. PROCESS INTEGRATION

2.1 Peran QA dalam Agile

Ceremony	Peran QA
Sprint Planning	Review acceptance criteria dan estimasi testing
Daily Standup	Update progress testing & blocker
Sprint Review	Demo hasil testing dan defect status
Retrospective	Evaluasi proses QA dan improvement

2.2 Aktivitas QA Utama

Aktivitas	Deskripsi
Definition of Done	Wajib ada unit test + QA approval
Three Amigos	QA, Dev, PO menyepakati requirement
Regression Testing	Otomatis setiap malam
Test Strategy Sign-off	Disetujui sebelum release besar

2.3 SDLC QA Activities

Fase	Aktivitas	Penanggung Jawab
Requirement	Acceptance criteria	PO + QA
Development	Unit testing	Developer
Code Review	Review test & logic	Dev + QA
CI/CD	Automation test	QA + DevOps
Pre-release	Exploratory testing	QA
Post-release	Monitoring defect	QA + Product

2.4 RACI Matrix

Aktivitas	QA	Developer	PO	Scrum Master
Unit testing	C	R	A	C
Integration testing	R	C	A	C
Acceptance criteria	C	I	R	A
Regression testing	R	A	C	I
Defect triage	R	R	A	C
Release approval	C	A	R	C
Fix defect	C	R	A	I
CI/CD maintenance	A	R	I	C

Keterangan:
R = Responsible

A = Accountable
C = Consulted
I = Informed

---

3. DEFECT MANAGEMENT PROCESS

3.1 Defect Flow

1. Defect dicatat di Jira
2. Triage harian oleh QA Lead
3. Penentuan severity (QA) & priority (PO)
4. Developer memperbaiki defect
5. QA verifikasi dan close ticket

3.2 Severity Definition

Severity	Deskripsi
S1 Critical	Crash aplikasi, data loss, security issue
S2 High	Fitur utama terganggu, ada workaround
S3 Medium	Bug minor, tidak mengganggu fungsi utama
S4 Low	Cosmetic issue / improvement

3.3 Priority Definition

Priority	Arti
P1	Harus diperbaiki sebelum release
P2	Diperbaiki dalam sprint berikutnya
P3	Backlog / tidak urgent

3.4 SLA

Severity	MTTD	MTTR	Penanganan
S1	< 1 jam	< 24 jam	Prioritas tertinggi
S2	< 1 hari	< 3 hari	Sprint berjalan
S3	< 3 hari	< 7 hari	Normal
S4	Tidak ditentukan	Backlog	Low priority

---

4. VERIFICATION & VALIDATION

4.1 Jenis Testing

Level Testing	Jenis	Pelaksana	Tools
Unit Testing	Functional	Developer	JUnit / XCTest
Integration Testing	API & system	Dev + QA	Postman / Newman
E2E Testing	User flow	QA	Ghost Inspector
UAT	User validation	PO	Manual
Performance	Load testing	QA	JMeter
Security	Vulnerability test	Vendor	SAST / DAST
Exploratory	UX testing	QA	Manual

4.2 Kriteria Automation

Kriteria	Penjelasan
High repetition	Sering dijalankan
Stable requirement	Tidak sering berubah
Deterministic	Hasil konsisten
Time consuming	Lebih efisien jika otomatis

4.3 Tools

Tool	Fungsi	Alasan
Ghost Inspector	E2E automation	No-code, cepat
Postman	API testing	Mudah & standar
JUnit/XCTest	Unit testing	Native support
Appium	Mobile testing	Cross-platform

4.4 Manual Testing

Jenis	Alasan
Exploratory	Butuh kreativitas manusia
Usability	Penilaian subjektif
UAT	Validasi bisnis
S1 Verification	Validasi manual tambahan

---

5. CONTINUOUS IMPROVEMENT

5.1 Retrospective QA Focus

Fokus	Evaluasi
Test reliability	Flaky test analysis
Defect leakage	Root cause analysis
Automation coverage	Evaluasi cakupan
Process improvement	Workflow QA

5.2 Feedback Loop

Loop	Metode
RCA	5 Whys untuk S1/S2
Post-release	Evaluasi setiap release
User feedback	CSAT & review
QA audit	Setiap 2 sprint

5.3 KPI Dashboard

KPI	Target
Test coverage	≥ 80%
Test reliability	≥ 95%
Defect leakage	≤ 2/month
CSAT	≥ 90%
MTTD	< 1 jam
MTTR	< 24 jam

KESIMPULAN

Strategi ini memastikan kualitas Streamline Retail tetap stabil melalui integrasi QA dalam seluruh proses Agile, penggunaan automation testing, serta continuous improvement berbasis metrik.
